CREATE OPERATION- The **Create** operation is used to add new documents to a collection. MongoDB provides methods like `insertOne()` for single documents and `insertMany()` for multiple documents.

Read Operation- The Read operation retrieves documents from a collection. MongoDB uses methods like `find()` to fetch multiple documents and `findOne()` to retrieve a single document.

```
> use("CRUD")

UPDATE OPERATION- The Update operation modifies existing documents.

MongoDB provides methods like update One() to update a single document and update Many() to update multiple documents. The \$set operator is commonly used to specify the fields to update.

```
db.CRUD.updateOne({roll:31},{set:{department:"ECA"}})
{
  acknowledged: true,
  insertedId: null,
  matchedCount: 1,
  modifiedCount: 1,
  upsertedCount: 0
}
```

```
{
  _id: ObjectId('6aae5e6505178ee015c9cb10'),
  roll: 31,
  name: 'Divyanshu',
  age: 21,
  department: 'ECA'
}
```

```
db.CRUD.updateMany({roll:22},{set:{department:"ME"}})
{
  acknowledged: true,
  insertedId: null,
  matchedCount: 1,
  modifiedCount: 1,
  upsertedCount: 0
}
db.CRUD.find()
```

```
{
  _id: ObjectId('6aae5e6505178ee015c9cafb'),
  roll: 10,
  name: 'Rehan',
  age: 20,
  department: 'ME'
}
{
  _id: ObjectId('6aae5e6505178ee015c9caf0'),
  roll: 11,
  name: 'Faheen',
  age: 21,
  department: 'ECA'
}
{

}
```

DELETE OPERATION- The Delete operation removes documents from a collection. MongoDB offers deleteOne() to delete a single document and deleteMany() to remove multiple documents based on a filter.

```
> db.CRUD.deleteOne({roll:15})
< {
  acknowledged: true,
  deletedCount: 1
}
> db.CRUD.find()
```

```
db.CRUD.deleteMany({department:"ME"})
{
  acknowledged: true,
  deletedCount: 16
}
db.CRUD.find()
```

```
